

Decision Owner memo — Switching an In-Flight CSV Project to CSA

To: Decision Owner

Re: Switching an In-Flight CSV Project to CSA

Basis: analysis-20261002T111530Z.md · Report · All files

Band (from §6): MEDIUM

Derived from §6 and the structured summary of analysis-20261002T111530Z.md; the six sections remain the source of truth.

In brief: The analysis gives a default course for the unexecuted remainder of this project and names the three project facts that would change it (§1, C5).

It examined whether changing validation method part-way through one in-flight project costs or risks more than it saves, and under which conditions that flips (§1).

Two chains are rated HIGH: validation evidence already executed carries over and needs a risk mapping rather than re-execution (C2), and under CSA the remaining rigor is re-allocated toward safety-relevant features rather than removed (C8).

The band is MEDIUM because the firm's SOP state, the not-high-risk share of remaining work and the system's regulatory scope are all unverified (§6, GT-9?, GT-10?, GT-13?).

The recommendation and its conditions are stated in the Answer block and §6; it depends on the SOP permitting risk-based assurance, a prior plan amendment, and the project's own counts showing a net saving (C3, C4, C5).
