

Risk view — Switching an In-Flight CSV Project to CSA

Derived from §6 and the structured summary of analysis-20261002T111530Z.md; the six sections remain the source of truth.

Band (from §6): MEDIUM

- **What risk does the analysis retire?** It retires the belief that CSA is a lower compliance bar, since the obligation is unchanged and only the method moves (C1, A-2). It also retires the fear that executed tests must be redone under a switch (C2, A-3).
- **What is unverified?** Four ground truths are unread: the SOP and plan state (GT-9?), the not-high-risk share (GT-10?), the ISO 13485 procedure wording (GT-11?) and the system's scope (GT-13?). Team competence in unscripted testing (A-7) and both effort estimates (A-16, A-17) are untested beliefs.
- **What could change?** A revised SOP would open the procedure gate and shrink the switch cost (A-4, A-19).
- **What does the analysis itself flag for caution?** The §6 Pre-check caps confidence at MEDIUM because C3 through C7 rest on ?-marked inputs (§6). The register names twelve risks with controls, led by CSA work executed before the procedure gate opens (C7).
