

Decision Owner view — Switching an In-Flight CSV Project to CSA

Derived from §6 and the structured summary of analysis-20261002T111530Z.md; the six sections remain the source of truth.

Band (from §6): MEDIUM

Decide not to switch the whole project now; finish under the approved CSV plan by default (C5). Move only the unexecuted remainder to CSA, at a documented boundary, when the SOP permits it, the plan is amended first, and your counts show a net saving (C5). The analysis is MEDIUM confidence because the call rests on three facts about your own system (§6).

- Read your validation SOP and plan to see whether risk-based assurance is allowed (C3).
- Risk-classify the remaining tests and count their scripted effort (C4).
- Confirm the system is device production or quality-system software (C7).

Your objection is right about an uncontrolled switch and wrong if it rests on CSA being weaker (C1).
