

Skeptic view — Switching an In-Flight CSV Project to CSA

Derived from §6 and the structured summary of analysis-20261002T111530Z.md; the six sections remain the source of truth.

Band (from §6): MEDIUM

Rivals ruled out (§4):

- That CSA is a lower compliance bar fails because validation proportionate to risk is required either way (C1).
- That a package must use one method throughout fails because hybrids are named in the guidance (C2).
- That FDA endorsement lets the team start now fails because the guidance is nonbinding and does not amend the firm's SOP (C3).
- That a single breakeven number can be stated fails because the bracket spans about 16 to 267 person-days (C4).
- That finishing under CSV locks the system in for life fails because the benefit defers to the first change (C6).

The weakest link is C5, a MEDIUM chain whose O1-versus-O3 tie at 78 a ± 1 change flips (C5).
